

Machine for cleaning air conditioner dust

Hi everyone

Problem Statement

-Zan Hao has a uncle that his name called tey jie wen, he has a back pain, his 45 and his job was to fix air conditioner

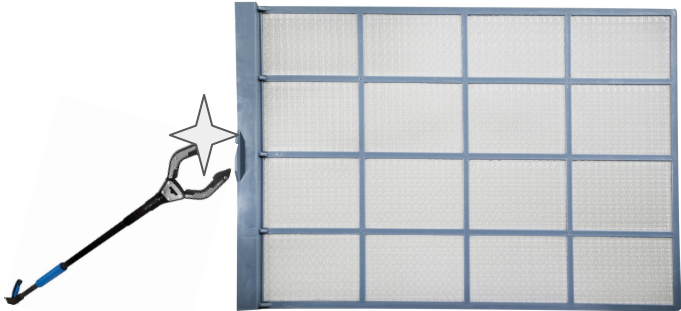

Solution for the problem

- A dust sensor
(a light, a light sensor,
A red light)

why do we make a dust sensor?

- the purpose of making the sensor is to detect the thickness of the dust in the filter gauze

Demo and User Feedback

Please give a feedback

Beneficiary and Desired Impact

-Cause uncle Jie Wen has a back pain, he no need to use ladder for climbing up and down any more, he can just use the sensor to let his job easier and saver

Inspiration and Learning

- In this project, we learnt how to manage time and teamwork. One of us did coding, one of us did the design of the hardware and one of us did the slide.

Thank you

code

```
int sensorPin = A0;

int sensorValue = 0;
void setup() {
  Serial.begin(9600);
  pinMode(9, OUTPUT);
  pinMode(10, OUTPUT);
}
void loop() {
  sensorValue = analogRead(sensorPin);
  Serial.println(sensorValue);
  digitalWrite(9, HIGH);
  if(sensorValue<200){
    digitalWrite(10, HIGH);

  }
  else
  {
    digitalWrite(10, LOW);
  }
}
```
